

Vaibhav Saxena

Software Development Engineer — Backend

SUMMARY

Backend engineer with 4+ years building scalable microservices for a high-traffic study-abroad fintech platform. Strong in **Java** and Spring Boot, with working breadth across **Kotlin** and **Python**. Owns business-critical systems end to end — a conditional-offer / visa workflow engine, a partner commission & billing platform, and a self-built async job framework. Focused on system design, PostgreSQL/Elasticsearch optimization, and quality-first delivery, having moved from SDET to SDE.

EXPERIENCE

Outleap Technologies Pvt. Ltd. (LeapScholar / GeeBee), Bengaluru — SDE (Backend)

Dec 2021 – Present

- Owned the **CAS / AIP conditional-offer and pre-visa workflow engine** on the GeeBee study-abroad platform — application state machine, deposit-blocker logic, and conditional document-requirement infra — reducing manual partner processing by 70–80%.
- Built a **partner commission & billing engine** owning the full University → GeeBee → CSP payout lifecycle — commissionable cases, CSP invoices, purchase orders, payment reversals, and commission payout v2 — eliminating manual payout effort and ensuring accurate, auditable settlements.
- Architected and built from scratch** an asynchronous **producer–consumer job framework** (Python + AWS SQS) — layered executor model, rate limiting, and job config/fallback on MongoDB — improving throughput and powering AI and batch workloads platform-wide.
- Built **Elasticsearch-backed search and data-sync services** (RestHighLevelClient, pagination/sort, cached university & commission sync) for high-traffic application discovery; optimized SQL on hot paths.
- Delivered **email delivery-log + suppression infra**, granular **RBAC** (HCC, KAM, country-head roles), and AWS **Lambda** jobs for growth/performance dashboards and SLA (TAT) calculation.
- Contributed backend changes to a production **GenAI SOP service** (LLM-based generation and humanization) and integrated it with the async job framework for queue-driven, scalable execution.
- Established **AI-assisted development workflows** by authoring project-wide `CLAUDE.md` context across all backend services — standardizing AI-driven code generation, reviews, and onboarding, and accelerating delivery.
- Built the entire **hybrid automation framework** and its centralized, reusable test utility from scratch (Selenium, REST Assured, TestNG, with ExtentReports/KLOV reporting and CI/CD on Jenkins) — reducing post-release defects ~80%.

KEY PROJECTS

GeeBee Study-Abroad Platform: Core platform for student applications and the CSP partner portal. Built the conditional-offer (CAS / AIP) and pre-visa workflow engine, the Elasticsearch-backed Course Finder search, and the commission, email delivery-log, and conditional document-requirement infrastructure.

Commission & Billing Service: Service owning the end-to-end commission lifecycle, invoicing, and payouts across universities, GeeBee, and CSP partners.

Swat — Async Job Framework: Python + AWS SQS producer–consumer engine I built from the ground up — rate limiting, job configuration/fallback, MongoDB persistence, and a pluggable executor model; the backbone for AI and batch processing.

CONTACT

Koramangala, Bengaluru,
Karnataka 560034

SKILLS

Languages

Java 21, Kotlin, Python, SQL

Frameworks

Spring Boot 3, Spring (JPA, Liquibase)

Datastores

PostgreSQL, MongoDB, Elasticsearch, Redis

Cloud / Infra

AWS (SQS, Lambda, S3), Docker, Jenkins CI/CD

AI / GenAI

LLM integration, prompt context, AI-assisted dev

Quality

Selenium, REST Assured, TestNG

Tools

Git, Jira, Postman, Metabase

AWARDS

Hackathon Winner — AI/ML (2023)

Document intelligence with AWS Comprehend & Rekognition

Performance Appreciation

Outleap Technologies — Jun 2023 & Jun 2024

EDUCATION

MCA — Jain University, Bengaluru
2023 – 2025 · 8.14 SGPA

BSc-IT — Aryan College, Ajmer
2017 – 2020 · 71.15%

CERTIFICATES

Udemy — DevOps Fundamentals
Google — Digital Marketing
TCS — Personality Development
